### NOW AVAILABLE TO FEDERAL AND STATE AGENCYS INVOLVED WITH THE CONTROL OF NOXIOUS WEEDS AND SEEDS

#### Portable Vehicle Decontamination

The transportation of Noxious Weeds and Seeds by vehicles is becoming more and more of a problem. One reason that there are few regulations about cleaning these vehicles is that up to now there has been no commonly accepted method for cleaning them.

This "Weed Washer" is patterned after the USFS Missoula Technology Development Center prototype built in Missoula Montana

This new Vehicle Decontamination Trailer can be set up by two technicians and operational in fifteen minutes. It includes 10 underbody sprayers, two hand held wands with 70 Feet of high pressure hose each, an 18 HP Honda gas engine powering a 27 GPM diaphragm pump producing 725 PSI., a 3000 Watt gas generator, a 16Ft by 26Ft Hazmat collection mat, 800 Gallons of recyclable water, all on a 22FT. flat trailer.

If you believe your agency needs this type of equipment or you know of another agency that does, give us a call for a quote and a delivery date. If you have any questions or comments please contact us at (559) 739 0676 or E-Mail [knbsales@earthlink.net](mailto:knbsales@earthlink.net).

Sincerely,

Robert J. Schweitzer
